

CISO Advisory Services

The demand for security expertise is growing, but few companies have means or justification to hire a CISO in house. In fact, only 29% of companies have a dedicated CISO on staff to define and oversee critical security policies and systems — despite the growing frequency and severity of cyber attacks each year.

Trapp Technology's CISO Advisory Services are designed to effectively fill those executive gaps for companies across the US, allowing them to cost-effectively leverage information security and data privacy expertise in a more efficient way than they could achieve with an in-house resource.

Strategic Executive Direction

Our CISO advisors can aid organizations to determine needs, plan appropriate goals, and design, implement and/or management of security initiatives to correctly align and integrate with the company's overall strategic business objectives.

- Network security and risk assessments
- Security program development and execution
- Executive-level advisory support

Executive Security Advisement and Support On Demand.

Policy Consulting

Trapp Technology can assess current security policies and practices within an organization to determine business appropriateness and technology policy relevance, detect where their policy and processes are weakest, and how they can be improved from business, strategic, and tactical risk mitigation standpoints.

Advising and Education

Companies seeking additional or interim security advisement can leverage our CISO services team to provide executive-level security advisement, educational training to appropriate the company personnel, and ultimately gain a trusted advisor on top-level cyber security matters when needed.

Risk Management and Mitigation Oversight

TRACKING AND REPORTING

Cyber security assessments and security monitoring oversight provides organizations increased visibility into the efficiency and effectiveness of their current security practices, highlighting network risks and vulnerabilities as they occur.

RISK ACCEPTANCE AND EXCEPTION ANALYSIS

Trapp Technology's thorough risk analyses and reports help companies gain deeper, data-driven insight into their overall risk awareness and threat tolerance. Ultimately, our analyses can help companies establish the policies needed to minimize, control, and effectively manage those risks.

Trapp Technology Advantage

TRUSTED EXPERTISE

Trapp Technology's security professionals have the technology skills and business savvy that address security vulnerabilities, manage risk, and allocate resources.

PROGRESSIVE TECHNOLOGY

Armed with our knowledge of industry-leading best practices, Trapp Technology's helps you stay ahead of business-relevant threats.

VALUED PARTNERSHIP

When we call ourselves your partner, we take it to heart. Our clients gain access to our deep bench of experts that fill in the skill, bandwidth, or resource gaps in your team.

CUSTOMER CENTRIC
