# Managed Security Technology

Trapp Technology's Managed Security Technology services can be applied to virtually any aspect of your security network, including your switches, firewalls, virtual private networks, and routers and access points to keep your network as resilient and protected as possible every second of the year.

Complete protection for critical security network components, Trapp monitors technology performance and minimizes security threats 24/7/365.

- 24/7 monitoring and support
- Quarterly updates
- Configuration and policy management included
- System auditing and event reporting included
- 24-hour SLA for change requests

Network Protection	System Analysis	Staff Support	Event Reporting	Security Fabric Integration

trapp TECHNOLOGY℠

Redefining IT℠

Completely Minimize System Vulnerabilities and Maximize Security Efforts Overall

Managed Switch

Intelligent Switches are a key component to any high performance network. Connecting multiple PCs, printers, servers, and cloud applications together allows organizations to send information like emails and documents in an efficient, smooth manner.

- Security features to protect vulnerable infrastructure with no slowdown
- Data separation compliance with network segmentation
- Port-level network access option, centrally manageable from any Next Generation Firewall
- Ability to enable voice, data, and wireless traffic across a single network
- High scalability with 1/10 GE or 40 GE port density

Managed Firewall

Keeping up with firewall vulnerabilities, managing the configuration and reporting on changes is a necessary component of cyber security. Trapp Technology offers the best next generation firewalls to our clients.

- Stateful and geolocation filtering
- IPS, application control, URL / web content filtering, DNS Filter, load balancing, SSL inspection, SSLVPN, IPSEC remote access VPN, site to site VPN
- Weekly analysis and reporting
- Log collection retention

Managed VPN

Trapp Technology provides a Managed VPN solution that confirms the identity of users and the health of their current device before they connect to your network.

- Dual factor authentication
- Single sign on
- Security features to protect vulnerable infrastructure with no slowdown

Managed Router / Access Point

Trapp's Managed Router/Access Point service offers complete lifecycle management of your routers including procurement, installation, configuration. Our experts will assess your current network needs to choose the best-in-class router for your business to ensure a proper configuration that will optimize your business's ability to perform.

- Secure network connectivity
- Dynamic Host Configuration Protocol (DHCP)
- End-to-end Quality of Service (QoS) from customer edge through CCI core
- Weekly analysis and reporting
