

Managed Vulnerability Scanning

Trapp's Managed Vulnerability Scanning service is designed to meet the demanding needs of organizations like yours. Using known and best-of-breed industry tools coupled with vulnerability expertise, we will scan and discover new vulnerabilities, report on remediation progress and aging vulnerabilities in your environment, and calculate remediation recommendations based on the most efficient means for IT effort to ultimately decrease risks and strengthen overall security efforts.

Vulnerability Scanning Capabilities

DISCOVERY

Gain greater visibility into your company network, system, and data assets relative to known and emerging vulnerabilities and risks.

SCANNING

We scan for network, system, and application vulnerabilities quickly and accurately. Trapp conducts credentialed scans for system hardening and patching that include local scans for deeper analysis. These scans are configured to run at specified times and days.

COVERAGE AND PROFILING

Trapp Technology thoroughly covers and profiles a broad range of your company IT assets, including:

- Network devices
- Virtualized systems
- Operating systems
- Databases
- Applications
- Cloud applications and instances

ENHANCED THREAT DETECTION AND COMPLIANCE OVERSIGHT

Actively managing vulnerabilities is least expensive to achieve when done correctly and regularly—yet much more can be achieved when you go with an expert team. Let Trapp help by delivering the data points you need to succeed in compliance more quickly than you can achieve in-house.

Further, Trapp can significantly decrease the time it takes for you to detect viruses, malware, backdoors, and internal hosts communicating with infected systems, running malicious processes, and web services linking to malicious content.

Reporting Capabilities

CUSTOMIZED REPORTS

Our Cyber Security Engineers and analysts deliver formal reports each month that give your company greater visibility into new vulnerabilities that have been discovered, what has been remediated, and what risks remain—all at no additional cost to your company.

EMAIL NOTIFICATIONS

Receive notification emails that detail recent scan results, remediation recommendations, and scan configuration improvements.

AUTOMATED DOWNLOADS

Automate and receive detailed reports of your most recent vulnerability reports.
