

Security Program Strategy and Compliance

The relationship between an organization's business priorities and its security posture has shifted. For leading organizations, material data breaches and cyber security exploits has driven change in their attitudes about the effectiveness of security programs.

Trapp Technology's Security Program Strategy and Compliance services are designed to give you the tools to reach a business aligned, threat aware program no matter where you are on your security journey.

Cyber Threat and Security Assessment

The road to confidence, whether for compliance or security sake, can be a daunting project that requires considerable effort within an organization. The dynamic state of affairs when it comes to cyber security can leave enterprises unable to discern the difference between business-relevant threats and risks less critical in nature. Our process takes the mystery out of threat forecasting, and gives you the information you need to make data-driven business decisions.

Creating New Strategies to Plan, Build and Run Effective Security Programs

Cyber Security Strategy

As a security professional, you are expected to understand the business needs and leverage your security program to increase operational efficiency, protect users and information, maximize return on technology investment and contain costs. But finding the requisite skill and manpower to effectively protect your business goes beyond just installing and running firewalls.

Trapp Technology's team of advisors help you stay ahead of business-relevant threats and risks. Our Cyber Security Strategy services include:

- Business Impact of Breach Vulnerability
- Attack and Penetration Recommendations
- Strategic Cyber Security Response Plan

Business Aligned, Threat-Aware

The realization is growing in the C-Suite that just one security incident or data breach could derail the growth and profitability of their companies because of the cost to remediate, fines and legal fees, and customer loss. As a result of this awareness, having an enterprise-wide IT security strategy that supports the company's mission and goals is growing in importance. With our proven process, organizations of all sizes from varying industries have gained confidence in their security posture and seeing their revenue goals realized.

We provide a wide range of capabilities – from security strategy development, to compliance readiness consulting, to environment design and oversight, we can help you elevate your security stance, regardless of your current position.

- Address gaps, manage risk and allocate resources to better protect your organization
- Bring creativity, experience and discipline to your security program
- Develop and align security strategies to support your business goals
- Assess your current program and develop a roadmap to mature your security initiatives
- Support leading security practices and consistent execution of your security strategy
- Help you protect what matters to your organization
